

Enrolling and Identifying Younger Students

identiMetrics™

Cheat Sheet

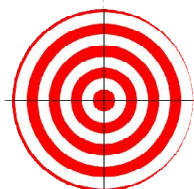

identiMetrics™ can be used for young students. Here are some helpful tips for enrolling and identifying younger students.

Tips for Enrolling Younger Students

1. **Use a Lighter Touch** - Smaller fingers need a lighter touch during enrollment.
2. **Guide Enrollment Placements** - Place the student fingers to ensure proper finger placement because younger students may lack the finer motor skills.

Tips for identifying Younger Students

1. **Practice, Practice, Practice** - Since younger students are still developing their fine motor skills they need to practice their finger scans.
2. **Change Sounds** - Changing the positive ID sounds regularly helps keep children focused and engaged. 
3. **Have Patience** - At first, your younger students may need a second or third try getting the proper finger placement. Be patient. They will learn to do this quickly.
4. **Give a Target** - Sometimes pointing to where the younger students where to place their fingers helps. Some people use stickers (just don't place it on the scanner glass).
