

Enrollment Station & Admin Station Explained

The identiMetrics Enrollment Station and Admin Station were designed with you in mind. Both products are tools that allow for smart convenient ways to manage your ID system and simplify your school day!

The Enrollment Station

Each student needs to enroll in the identiMetrics software in order to be identified. Enrollment is the process of registering both index fingers to a specific record in the identiMetrics database. The Enrollment Station is a convenient and flexible tool used for enrollment only.

While enrollment can take place at any scan location, many schools initially use the Enrollment Station on a mobile cart, laptop or tablet to enroll students in each classroom, during back to school night or new student orientation. After initial enrollment, many schools have the Enrollment Station in the front Office in order to enroll new incoming students during the school year.

The Enrollment Station is included in the Most Popular & Premium Packages or can be purchased separately (\$700 + \$100 installation + S&H). Enrollment Stations come with a finger scanner.

The Admin Station

The Admin Station is an excellent tool that streamlines the management of your identiMetrics System. It provides access to all your data services so you can monitor enrollment activity, manage data and users, and access administrative functions - all from the comfort of your office.

The Admin Station is included in Premium Package or can be purchased separately (\$600 +\$100 installation). Admin Stations do not come with a finger scanner.
